DETAILED ACTION

1. Claims 1-4, 6, 10, 19, 21, and 22 have been examined.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-4, 6, 10, 19, 21, and 22 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Balasubramaniam et al. U.S. Pat. No. 6499109 (hereinafter Bal).
- 4. As per claim 1, Bal discloses a method comprising: a first electronic device deriving a digital signature and associating the digital signature with a web page only if the web page includes code to invoke a control object (Bal: column 3 lines 7-19: authenticode is generated for the ActiveX controls and the authenticode is associated with the web page when the ActiveX control is embedded in the web page and the authenticode is associated with the webpage; column 4 lines 52-57: the authorized URL is the URL that has passed the digital signature authentication); and subsequent to associating the digital signature with the web page, the first electronic device delivering the web page to a second electronic device capable of authenticating the digital signature such that the second electronic device executes at least a portion of the web page in response to authenticating the digital signature (Bal: column 7 lines 29-51: after

Art Unit: 2131

authenticating the digital signature, execute a portion of the web page by querying the browser to determine the URL of the webpage).

- 5. As per claim 2, Bal as modified discloses the method as recited in claim 1. Bal as modified further discloses the associating further comprises attaching the digital signature to the web page (Bal: column 3 lines 7-19: the authenticode and the controls are embedded in the web page).
- 6. As per claim 3, Bal as modified discloses the method as recited in claim 1. Bal as modified further discloses in an event that the web page does not include code to invoke the control object, delivering the web page without a digital signature (Bal: column 7 lines 29-51: determine that a control object is present in the web page and then authenticate whether the web site is authorized, if the control object is not present, there is no digital signature).
- 7. As per claim 4, Bal as modified discloses the method as recited in claim 1. Bal as modified further discloses wherein the web page includes a confirmation module that is used by the electronic device to authenticate the digital signature (Bal: column 7 lines 41-52).
- 8. As per claim 6, Bal as modified discloses the method as recited in claim 1. Bal as modified further discloses the web page is generated in an active server page (ASP) environment (Bal: column 5 lines 8-28: the ActiveX compatible browsers).

Application/Control Number: 09/650,712 Page 4

Art Unit: 2131

9. As per claim 10, Bal discloses the method as recited in claim 1. Bal as modified further discloses designating one or more sources of a web page authorized to invokes a control object (Bal: column 6 lines 20-28: use the ICSP-authorized web site).

- 10. As per claim 19, Bal as modified discloses the system as recited in claim 1. Bal as modified further discloses wherein the control object includes a confirmation module configured to authenticate the control object (Bal: column 6 lines 26-29).
- 11. As per claim 21, Bal as modified discloses the method as recited in claim 19. Bal further discloses wherein the confirmation module is further configured to determine if the web page comes from a source that is authorized to invoke the control object and the control object is invoked only if the source of the web page is authorized to invoke the control object (Bal: column 7 lines 26-51).
- 12. As per claim 22, Bal as modified discloses the method as recited in claim 19. Bal as modified further discloses wherein the confirmation module is called by the web page prior to the web page invoking the control object (Bal: column 7 lines 26-51).

Response to Arguments

13. Applicant's arguments filed on 11/20/06 have been fully considered but they are not persuasive.

Regarding applicant's remarks, applicant argues that the newly amended claim 1 differentiate from prior art in which prior art of record does not disclose a first electronic device deriving a digital signature and associating the digital signature with a web page only if the web page includes code to invoke a control object. However, Bal clearly discloses associating the authenticode to a web page when the web page contains ActiveX controls, which is code to invoke control object (Bal: column 3 lines 7-19: only if the web page contains activeX control will the digital signature be present). Therefore, applicant's argument is respectfully traversed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shin-Hon Chen whose telephone number is (571) 272-3789. The examiner can normally be reached on Monday through Friday 8:30am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
